Education

University of California, Berkeley **Expected Graduation: May 2027**

Double Major: Bachelor of Arts in Data Science, Applied Mathematics *Berkeley, CA*

Relevant Coursework: Principles and Techniques of Data Science, Data Structures and Algorithms, Structures and Interpretation of Computer Programs, Efficient Algorithms and Intractable Problems, Probability and Random Processes, Linear Algebra and Differential Equations, Web Development, Advanced Programming in R, Intro to ML, Intro to AI

Experience

VRChat **Jan 2026 – May 2026**

Software Developer (Contract) *Berkeley, CA*

- Built backend services in **Python (FastAPI)** for user session tracking and world event logging, processing real-time interaction data across instances with 20–80 concurrent users per session
- Developed data pipelines using **Python (Pandas)** and **PostgreSQL** to aggregate engagement metrics (session duration, interaction frequency), supporting analysis across a platform with 100K+ concurrent users
- Designed a monitoring dashboard using **Next.js, Node.js, and Plotly** to visualize real-time system metrics, reducing debugging time and improving performance visibility across active sessions

Certis Oncology **Aug 2025 – Jan 2026**

Software Developer (PM, Tech Lead, Contract) *Berkeley, CA*

- Led 13 engineers/designers to build a self-service platform for tumor model uploads and metadata processing, triggering automated prediction pipelines with real-time monitoring via **WebSockets/SSE**
- Engineered backend database architecture with per-user **Postgres** schemas and a secure chatbot environment using **Angular + NestJS**, facilitating tailored insights for cancer research workflows
- Integrated an LLM prediction pipeline into a dashboard and chat interface, supporting iterative natural language queries, multi-threaded sessions, and interactive visualizations for secure data exploration across 10+ clients

Recidiviz **Jan 2025 – May 2025**

Software Developer (Contract) *Berkeley, CA*

- Engineered an LLM-powered SMS check-in system using **TypeScript, LangChain**, and **Twilio**, processing 100+ weekly patrol officer case notes into personalized messages, reducing manual drafting time by 60% while flagging urgent needs
- Designed and deployed scalable data pipelines on **Firebase**, implementing topic schemas, confidence scoring, and scheduling logic to prioritize high-risk cases and reduce officer follow-up delays by 40%
- Built full-stack officer tools (case note UI, chat logs, evaluation framework, Google Calendar scheduling), enabling review of 200+ client interactions per month with structured evaluation workflows and improved LLM output reliability

Lafayette Square **Jan 2025 – May 2025**

Software Developer (Contract) *Berkeley, CA*

- Developed **RESTful APIs** in **Python (Flask)** on **Snowflake** to deliver demographic and economic insights (housing costs, homeownership) by district/city/state, improving reliability for 20+ clients and reducing query runtime by ∼30%
- Built an automatic PDF generator within an admin dashboard and integrated **SQL** pipelines, enabling investment teams to create customizable reports with adjustable styling through an interchangeable frontend interface

PayPal **Sep 2024 – Dec 2024**

Software Developer (Contract) *San Francisco, CA*

- Built agentic workflow using **CrewAI** and **LangChain** to automate PRD creation, refinement, and readiness evaluation with multi-perspective AI feedback, delivering metrics/trends through dashboard visualization in **Next.js**
- Deployed Llama-based agents to generate AI-driven insights with **Kubernetes** and **Datadog**, achieving 99.9% uptime across 50+ integrated systems while accelerating feedback cycles and improving documentation quality
- Developed AI chatbot that automatically retrieves data from Jira Epics and Stories based on PRDs through REST APIs (Jira, GitHub, Slack) with **OpenAI**, providing engineers with real-time progress insights and recommendations

Projects

Notion Replica | *React, Next.js, Chakra UI, Postman, MongoDB, HTML/CSS*

- Developed a responsive productivity tracking web application using **Next.js** and **Chakra UI** for frontend, featuring graph visualization using REST APIs (Google Charts, Plotly, Chart.js) to provide insights into work patterns
- Utilized REST API operations with **Node.js** to store weekly logs and handle user requests on **MongoDB**

Additional Skills

Programming Languages: Python, Java, C/C++, JavaScript (TypeScript), SQL, R, HTML/CSS
Developer Tools: Git, Tableau, VS Code, Jupyter Notebook, RStudio, Google Cloud Platform (GCP), AWS (S3), Datadog
Technologies/Frameworks: React.js, Next.js, Node.js, Flask, FastAPI, PostgreSQL, Snowflake, Firebase, MongoDB, LangChain, OpenAI, Twilio, CrewAI, Kubernetes, Angular, NestJS, Pandas, Matplotlib, scikit-learn, TensorFlow, PyTorch
